Request for Continued Examination

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on August 13, 2009 has been entered.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

As for **claim 26** and all claims depending therefrom, the prior art of record fails to sufficiently describe and/or suggest a sensor device for non-contact detection of conditions of a surface, the sensor device comprising: a light source for emitting light towards the surface; a first detector, a second detector, and a control means for receiving and evaluating the received output from the detectors based on an amount of diffuse reflected and mirror reflected light; the sensor device further comprising: a first linear polarization filter arranged in a path of the light from the light source and to the surface for the polarization of the emitted light; and a second linear polarization filter arranged in a path of the light between said surface and one of the first detector and the second detector.

As for **claim 44** and all claims depending therefrom, the prior art of record fails to sufficiently describe and/or suggest a sensor device for non-contact detection of conditions of a surface, the sensor device comprising: a light source for emitting light towards the surface; a

Art Unit: 2612

first detector, a second detector, and a control means for receiving and evaluating the received output from the detectors based on an amount of diffuse reflected and mirror reflected light; one or more arrangements for detecting conditions of the surface, said arrangements comprising at least one of: an infrared light source for emitting light within the wavelength range of 930 nm to 970 nm towards the surface and an absorption detector; a light source for emitting light towards the surface, a path of the light having an angle in a range of 15 to 70 degrees to the surface normal and a retro-reflection detector arranged for receiving retro-reflected light in said path; a light source for emitting polychromatic light towards the surface and at least two range detectors arranged to detect each a wavelength range of reflection of said emitted light; and a noise sensor for receiving noise from a vehicle traveling along a road and producing an output to the control means accordingly, on which the vehicle the device is arranged.

These along with further limitations presented in the claims render the application allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
